# Use-Case Specification: Remove Playlist

## 1. Use-Case Name : Remove Playlist

### 1.1 Brief Description

This use case allows admins or curators to remove a playlist from the system.

## 2. Flow of Events

### 2.1 Basic Flow

1. The admin/curator initiates the "List Playlist" action.
2. The system displays the playlist list and "Action" column.
3. The admin/curator clicks on the "x" button to remove the playlist.
4. The system prompts for confirmation.
5. The admin/curator confirms the action.
6. The system responds with a success message indicating that the playlist has been removed.

### 2.2 Alternative Flows

None.

Beatify	Version: 1.0
Use-Case Specification: Remove Playlist	Date: 13/11/2024

### 3. Special Requirements

- Only authorized users (admins and curators) can remove playlists
- The playlist's data should be completely removed from the database
- The system must maintain logs of playlist removals for auditing purposes
- The system should ensure data integrity by properly removing all references to the playlist

### 4. Preconditions

- The admin/curator is authenticated and authorized to perform playlist removal actions
- The playlist exists in the system
- The playlist data is accessible in the database

### 5. Postconditions

- The playlist is successfully removed from the database
- All associated data (songs, playlist metadata, featured locations) are properly cleaned up
- A success message is displayed to the admin/curator confirming the playlist's removal
- The system's playlist count is updated accordingly
- The action is logged in the system's audit trail

### 6. Extension Points

None.
